

MKM

Sturdy traditional range with 30x30 hotplates

Sizes

Available in 2, 4 or 6 cooking zones

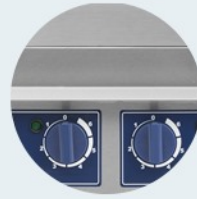

Highlights

Small heavy duty hotplates

30x30 cm heavy duty hotplates

The hotplates are extremely robust and therefore ideally suited to heavy duty use. These hotplates can remain switched on even when there is no cookware on them, as a result of their strong construction.

Control with dial

Easy regulation

The supply of heat is controlled by a seven-position switch. A clear sign and indicator light indicate whether the plate is switched on.

Protection rails

Sturdy protection rails

The ranges are fitted as standard with four protective rails, but fewer rails can also be provided if desired.

Stainless steel rack with a shelf

Sturdy and easy to clean

The stainless steel support and rack are made in a hygienic design that makes cleaning easy.

300 mm free height under the range

More space for easier cleaning

With a free height of 300 mm under the range, cleaning under the appliance becomes easier while there is still space on the shelf.

Adjustable feet

Adjustable for 100 mm

The adjustable feet makes it possible to fit the range in kitchens with heights between 850 and 900 mm height.

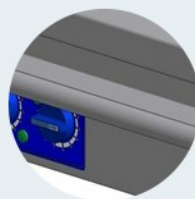

Accessory

Shelves on the side

Shelves mounted on the range

The shelves can be mounted on the left, right or both sides of the range and are a practical storage place for utensils or ingredients.

Handrail

Handrail in the front of the range

Gives the chef a rail to hold on to, in inclined positions.

Sea rail

Keeps your pots on the range

The sea rail is mounted safe in the brackets of the range so every zone is separated. The sea rail is useful on ships to prevent the pots and pans to fall off the range.

230V and 440V

Special versions for 230V or 440V

As special versions the ranges are available for or 230V or 440V. Please notice the power can vary on these models.
