## MobilityLine.

# Quick and easy to move.

Cooking systems equipped with MobilityLine features are flexible for use in hotels, convention centers, stadiums and at off site catering locations. Easy-rolling, stable casters make it easy to transport tabletop and floor models to different locations. Connecting them is a breeze, too.

Mobility can be beneficial in conventional kitchens as well, for example to facilitate cleaning. There's no longer a need to keep space between cooking systems for service purposes, which saves a great deal of space in the kitchen.

Optional mobility accessories are available for all iCombi models, and can be retrofitted by a service technician at any time (with the exception of the XS).

### ① MobilityLine floor models Sizes 20-half size, 20-full size

Floor models can be attached to a special frame with four robust casters and two locking brakes to allow effortless movement. The frame uses the handle of the mobile oven rack.

#### The MobilityLine includes:

- › Special frame with four casters and two locking brakes

### ② MobilityLine tabletop models Sizes 6-half size to 10-full size

Tabletop models can be bolted onto the Stand II MobilityLine. Handles on either side protect the cooking system and work together with the large, stable casters to facilitate movement.

#### The MobilityLine includes:

- › Stand II MobilityLine
